

- Local service, including connection charges, enhanced service, such as Caller ID, and extended area services (EAS).
- Wireless services, including cellular, PCS, and paging.
- In-state long distance services, including prepaid calling card, operator-assisted, collect, calling card and private line.

NUSF Remittances and Payments

The Commission projected the NUSF surcharge would generate \$64.8 million during the July 2003 through June 2004, fiscal year. During this period, the NUSF collected \$64.1 million, a variance of -1.1 percent. The Commission projected that during this same period, the NUSF would pay out \$74.0 million. During this period, \$68.9 million was actually paid to telecommunication providers, a variance of -6.8 percent. This is due to slower growth in telephone subscribers and the reservation of funds for the rural tele-health network that have not yet been distributed pending approval of a final plan. During the 2003-2004 fiscal year, the NUSF processed 2,500 remittances and made 795 disbursements.

As of the beginning of January 2004, the NUSF had a balance of \$68.2 million. As of June 30, 2004, that balance had declined to \$65.6 million. Previously, the NUSF was estimated to have a fund balance of \$61.0 million as of June 30, 2004, compared to the actual balance of \$65.6 million. This variance is primarily due to lower than projected payouts as discussed above and by higher interest returns than projected.

Significant Issues

There are several significant issues that will impact the NUSF during the upcoming year:

1. The Commission, in Docket NUSF-26, is developing a permanent funding mechanism that may change the manner in which universal service support is calculated.
2. The Commission continues to work with the Nebraska Hospital Association to develop a statewide tele-health network. The Commission has reserved \$900,000 a year for this purpose. These monies will be distributed only to eligible telecommunication companies that provide the connections for this network.
3. The expansion of broadband and Voice-over Internet Protocol (VoIP) services. In many instances, these services replace traditional telephone services and it remains unclear whether these services can be required to contribute to universal service.
4. Changes in the Nebraska Telephone Assistance Program. The FCC recently required states to implement a re-verification program for enrollees. This may result in the need to re-certify more than 20,000 individuals on a regular basis. Also, the Commission continues to increase enrollment in the program.

Nebraska Telephone Assistance Program

In 2003, the Commission changed the name of the Nebraska Lifeline and Link-Up programs to the Nebraska Telephone Assistance Program or NTAP. This was done to

distinguish the program from the Lifeline medical alert service. NTAP assists qualifying low-income individuals with obtaining and keeping telephone services by lowering monthly service and connection rates. The Commission has adopted a policy to maximize the amount of federal support for the NTAP. At a minimum, federal support is available to waive the federal subscriber line charge (SLC), which ranges between \$3.50 and \$6.50 per month, and reduce basic local exchange rates by \$1.75 per month. Additional federal matching support is available, equal to one-half of any state support, up to a maximum of \$1.75 per month. The Nebraska Universal Service Fund provides support of \$3.50 per month so that the NTAP can receive this additional \$1.75 per month in federal support. As a result, an additional \$5.25 per month in support is available to qualifying Nebraska telephone subscribers. To qualify for the NTAP, a consumer must participate in one of the following programs:

- 1) Medicaid;
- 2) Food Stamps;
- 3) Supplemental Security Income (SSI);
- 4) Federal Public Housing Assistance; or
- 5) Low-Income Home Energy Assistance Program (LIHEAP).

NTAP also provides a credit of fifty percent, up to \$30.00, for one-time connection on a single line of service, free toll blocking, and a deferred payment schedule for charges to establish service on which the consumer does not pay interest. This is provided solely through federal support, although the NUSF does cover administrative costs; and eligibility is based on the same criteria list above. Federal support is now available to low-income consumers living on tribal lands up to an additional \$25.00 per month. This increased support cannot bring the basic local exchange rate below \$1.00 per month. Additionally, federal support of up to \$100 is available to consumers living on tribal lands to reduce the initial connection and line extension charges. Further, eligibility criteria for consumers living in tribal areas has been expanded to include the following additional federal assistance programs:

- 1) Bureau of Indian Affairs General Assistance;
- 2) Tribally-administered Temporary Assistance for Needy Families;
- 3) Head Start (only those meeting its income qualifying standard); or
- 4) National School Lunch Program's free lunch program.

Currently, approximately 20,000 Nebraskans are enrolled in the NTAP program and receive support from the NUSF. This represents an increase of twenty percent since January 2004. The Commission is currently working on a cooperative effort with Health and Human Services to mail pre-approved NTAP applications to persons that are currently enrolled in the Medicaid and Food Stamps programs but not enrolled in the NTAP. Since September 2003, 36,000 pre-approved applications have been mailed to eligible persons. More than 10,000 of those applications have been returned and processed.

The Commission continues to work with Health and Human Services (HHS) offices, area aging agencies, housing authorities and others across the state to provide information about the NTAP.

Nebraska Telephone Assistance Program Implementation

The following is a statistical summary of applications processed for each fiscal year ending June 30 since program inception (January 1, 1998):

	Fiscal Year Total		Cumulative to Date	
	Total Applications Processed	One-Time Connection Applications	Total Applications Processed	One-Time Connection Applications
FY 97-98	11,355	435	11,355	435
FY 98-99	4,294	798	15,649	1,233
FY 99-00	4,607	829	20,256	2,062
FY 00-01	3,851	1,716	24,107	3,778
FY 01-02	3,726	1,594	27,833	5,372
FY 02-03	4,117	1,989	31,950	7,361
FY 03-04	7,298	2,226	39,248	9,587

PART VII

Wireless E911 Fund

911//E911 Information

Wireline, or landline, 911 service and funding is governed by *Neb. Rev. Stat.* §§ 86-1001 to 86-009. Section 86-1005 requires the Commission to report the attached information to the Legislature. The following guidance regarding use of 911 surcharge funds is also provided:

- Funds generated by the service surcharge shall be expended only for the purchase, installation, maintenance, and operation of telecommunications equipment and telecommunications-related services required for the provision of 911 services. *Neb. Rev. Stat.* §86-1003(5).
- Funds collected by a governing body from the imposition of a service surcharge shall be credited to a separate fund apart from the general revenue of the governing body and shall be used solely to pay for the costs for 911 service. *Neb. Rev. Stat.* §§ 86-1007.

E911 Definitions

7-Digit Dialing: Where a 911 line is not available, and the public entity provides emergency service through a seven-digit number.

Basic 911: Emergency telephone system that connects 911 callers to a designated PSAP. Call routing is determined by originating central offices only. Basic 911 may or may not support ANI and/or ALI.

Stand-Alone Location Identification System (SALI): An in-house 911 database that is maintained by the PSAP. Database houses ANI/ALI records.

ANI/ALI: The automatic display at the PSAP of the caller's telephone number, the address/location of the telephone and supplementary emergency service information.

Enhanced 911: Emergency telephone system which includes network switching, database and CPE elements capable of providing selective routing, selective transfer, fixed transfer, ANI and ALI.

Pending Enhanced: These are the PSAPs that are in the phase of implementing enhanced 911-routed trunking.

ANI: Automatic Number Identification is the telephone number associated with access line from which a call originates.

ALI: Automatic Location Identification is the address associated with the caller's number.

ESN: Emergency Service Number is a three- to five-digit number that identifies the emergency agencies designated to serve a specific geographical area. The ESN facilitates selective routing and selective transfer to the appropriate PSAP and the dispatching of the proper service area.

Selective Routing: (SR) The routing of a 911 call to the proper PSAP based upon the location of the caller. SR is controlled by an ESN, which is derived from the customer location.

Selective Transfer: The capability to transfer a 911 call to a response agency by one of several buttons designated as police, fire and medical; based on the ESN of the Caller.

Fixed Transfer: The capability to transfer a 911 call to a pre-determined location by activating a single button.

Public Safety Answering Point (PSAP): An answering location for 911 calls originating in a given area. PSAPs can be located at police, fire or emergency medical service communication centers, which handle all emergency communications for an area.

LB 585

A bill for an act relating to telecommunications; to provide enhanced wireless 911 service; to establish a surcharge on wireless service subscribers; to define terms; to provide powers and duties; to create an advisory board; to create a fund; to provide for confidentiality of certain records; to provide immunity as prescribed; and to declare an emergency.

Effective July 1, 2001, a 50-cent surcharge will be collected on each subscriber with a billing address in Nebraska. Wireless carriers will remit the surcharge to the Public Service Commission 60 days after the last day of the month. Public Service Commission will remit the funds to the State Treasurer for credit to the Enhanced Wireless 911 Fund.

Outline of Phase I Implementation Requests

As of August 18, 2004, there have been a total of 42 counties that have implemented Phase I. There are 21 counties with Basic 911, the remaining counties are in the process of implementing E911. Selective routing is a requirement that needs to be in place, before Phase I can be implemented.

Phase II Implementation Plan

The Commission released a Request for Proposal (RFP) in May 2004. This RFP will provide the Commission the information to select vendors of choice that will provide the necessary infrastructure to enable PSAPs to receive Phase II E911 wireless calls.

The Phase II plan consists of equipping the PSAPs with GIS hardware and software capable of plotting the latitude and longitude of a Phase II E911 wireless call. Map data layers will be created to provide accurate map data to plot the calls. There are also counties where their

current PSAP 911 equipment will be replaced due to the inability to receive and process Phase II E911 wireless calls.

Wireless E911 Terminology

Phase I: Required by FCC Report and Order 96-264 pursuant to Notice of Proposed Rulemaking (NPRM) 94-102. The delivery of a wireless 911 call with the call-back number and identification of the cell-sector from which the call originated. Call routing is determined by cell-sector.

Phase II: Required by FCC Report and Order 96-264 pursuant to Notice of Proposed Rulemaking (NPRM) 94-102. The delivery of a wireless 911 call with Phase I requirements plus location of the caller within 125 meters (410 feet) 67 percent of the time and selective routing based upon those coordinates. (Target date, October 2001.)

Signal Control Point (SCP): Provides routing of all the necessary data to the mobile switching center and ALI database.

Mobile Switching Center (MSC): The wireless equivalent of a central office, which provides switching functions from wireless calls.

Cell Sector: One face of a cell antenna (typically three-sided) that operates independently of the other sectors.

Cell Site: The location of a cell and related equipment.

Footprint: The geographic area covered by a particular wireless cell or cell sector.

Pseudo Automatic Number Identification (pANI): A telephone number used to support routing of wireless 911 calls. It may identify a wireless cell, cell sector of PSAP to which the call should be routed.

Pseudo Automatic Location Identification (pALI): An ALI record associated with a pANI, configured to provide the location of the wireless cell or sector and information about its coverage or serving area (footprint).

Status of E911

RED: Phase I implemented
FUCHSIA: Requested Phase I
NAVY BLUE: E911 Implemented, No cell tower coverage
GREEN: E911 implemented, expecting to request Phase I
YELLOW: Implementing E911
BLUE: Basic 911

REDACTED FOR PUBLIC INSPECTION

Copy of Tab 8. OMA UNE summary

REDACTED FOR PUBLIC INSPECTION

TAB 9

Request: For purposes of validating the use of E911 records as a surrogate for competitive access lines, provide the corresponding E911 record counts for the Qwest Communications business and residence access lines.

Response:

Comparison of Qwest E911 Records to Qwest Access Lines:
Omaha/Council Bluffs MSA
(April 2004)

A direct comparison of E911 records to Qwest retail access lines in service tracked in the FDM database is not a straightforward exercise since the E911 database is an external database maintained by Intrado, a non-Qwest entity, and the E911 data consists of "customer records" as opposed to access lines. There is not a 1:1 correlation between E911 records and access lines for a number of reasons, including:

- The timing of database updates is not the same for the two databases. For example, Qwest's FDM database is automatically updated via CRIS record activity. Updates to the Intrado E911 database is a two-step process: Qwest issues an electronic order to Intrado to change an E911 record and Intrado then processes the request. Depending on the date on which an in-service tally is taken, it is possible that a Qwest line disconnect or addition may be posted to the FDM database but not yet reflected in the Intrado database.
- Qwest does not provide data to Intrado for "incoming only" access lines that are not capable of originating outbound calls (and therefore will never originate a call to 911). For example, Qwest does not report Direct Inward Dial PBX trunk records to Intrado. This will cause Qwest's FDM tracking of PBX trunk quantities to exceed Qwest PBX trunk E911 records in the Intrado database. (However, Qwest is aware through confidential information obtained in past state regulatory proceedings that some carriers do report DID trunk records to Intrado. There is clearly variance in policies carriers follow in reporting E911 record information).
- Qwest's FDM database tracks Qwest access line quantities by wire center. The Intrado database does not track in-service E911 records by wire center. Rather, the Intrado E911 database tracks E911 record data by customer name, telephone number, street address and community name.
- In some instances, typically due to an oversight or order entry error, Qwest is aware that Intrado records reflect E911 records for customers who have disconnected. Since this does not create a public safety issue (since no calls to

REDACTED FOR PUBLIC INSPECTION

911 will be made from numbers that have been disconnected), these situations are typically not high priority and are normally resolved via periodic database clean ups. Intrado's policy is that no customer record will be changed without an authorizing service order from the responsible carrier, and any data clean up must start with an electronic order from the responsible carrier.

For comparison purposes, I have pulled the Qwest residential and business Intrado E911 records from the custom Intrado report for April 2004 we had commissioned for the Triennial Review effort. This report provides, by residence and business categories, the number of Qwest E911 records by community name for each Qwest state. For this exercise, we have pulled only those communities that are within the Omaha/Council Bluffs MSA. The corresponding Qwest access line quantities are drawn from the April 2004 FDM Report 36, and consist of Qwest retail lines in service (including Coin and Official Company Service). The comparisons are as follows:

REDACTED – FOR PUBLIC INSPECTION

	<u>Residence</u>	<u>Business</u> (incl coin)	<u>Total</u>
Iowa portion of Omaha MSA:			
Intrado Qwest E911 Records:	REDACTED	REDACTED	REDACTED
Qwest FDM 36 line totals	REDACTED	REDACTED	REDACTED
Difference	REDACTED	REDACTED	REDACTED
Nebraska portion of Omaha MSA:			
Intrado Qwest E911 Records:	REDACTED	REDACTED	REDACTED
Qwest FDM 36 line totals	REDACTED	REDACTED	REDACTED
Difference	REDACTED	REDACTED	REDACTED

While, for the reasons stated above, there will never be a 1:1 correlation between Intrado E911 records and Qwest access lines in service, there is a correlation of at least 90% in each category shown. This suggests that Intrado data cannot be used as a precise measure of Qwest access lines but is a reasonable directional proxy.

Responses to FCC inquiries

TAB 10

- Request:**
- a. Provide detailed records of all wholesale services (UNEs, LIS trunks etc) purchased from Qwest Communications by all the competitors in the MSA.
 - b. Provide a list of collocators by serving wire center in the MSA.
 - c. As a follow-up to the Teitzel affidavit (page 22 regarding Alltel) provide additional detail on what Alltel purchases from Qwest Communications, what their network looks like, what services Alltel offers throughout the MSA.
 - d. Provide any available additional data on Cox as a competitor in the Omaha MSA.

Response: ***Note: the information requested is Confidential.***
The requested wholesale detail for parts a. b. and c. above is provided in Tab 8 in a high-level, summary form, to protect the privacy of information which is proprietary between the CLECs and Qwest subject to the terms of individual interconnection agreements.

Information regarding AllTel's Fiber routes in the Omaha MSA (c. above) can be found in Tab 3.

In addition, Qwest submits data prepared by TNS Telecoms (an independent research entity) that presents the relative telecommunications market shares in the Omaha/council Bluffs CBSA.

Additional data on Cox as a competitor (part d. above) can be found in Tab 15 of this binder.

Source: Qwest internal wholesale and network tracking systems, GeoTel and Power Engineering, TNS Telecoms.

Responses to FCC inquiries

TAB 11

Request: File the list of serving wire center classifications from the Triennial Review Remand in this record.

Response: Attached is the listing of Wire Center Classifications based on the FCC's criteria as outlined in the TRRO (presence of fiber-based collocators, number of business access lines) as filed with Jeffrey Carlisle on February 18th. Also attached is a subset of that data for the Omaha MSA wire centers only.

Source: Qwest internal network collocation ordering and provisioning database, internal wholesale tracking, and FDM retail tracking services database.

**Re: Unbundled Access to Network Elements, WC Docket No. 04-313;
Review of Section 251 Unbundling Obligations for Incumbent Local
Exchange Carriers, CC Docket No. 01-338**

Dear Mr. Carlisle:

This submission responds to your letter of February 4, 2005, asking Qwest to provide a list identifying by Common Language Location Identifier (CLLI) code which wire centers in Qwest's operating areas satisfy the Tier 1, Tier 2 and Tier 3 criteria for dedicated transport, and identifying by CLLI code the wire centers that satisfy the nonimpairment thresholds for DS1 and DS3 loops in the *Triennial Review Remand Order*.¹

Enclosed are two attachments. Attachment A identifies which of Qwest's approximately 1,200 wire centers satisfy the Tier 1, Tier 2 and Tier 3 criteria adopted in the *Triennial Review Remand Order*. Attachment B lists the wire centers that satisfy the nonimpairment standards for DS1 and DS3 loops in the *Order*. These classifications were made based on the definitions of "business line" and "fiber-based collocator" in the *Order*.

Business Lines. Consistent with the definition in the *Order*,² Qwest determined the number of "business lines" in each wire center by computing the sum of the following:

¹ *In the Matter of Unbundled Access to Network Elements; Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, WC Docket No. 04-313, CC Docket No. 01-338, *Order on Remand* ("Triennial Review Remand Order" or "*Order*").

² 47 C.F.R. § 51.5, as attached (Appendix B) to the *Order*, to be published in the Federal Register and codified in the C.F.R.

- Qwest's switched business access lines (*i.e.*, single, multiline and Public Access (Coin) Lines) in the wire center, based on Qwest's most recent ARMIS Report 43-08 data, which is current as of December 2003 and was filed with the Commission in April 2004. This figure includes ISDN and other digital access lines. Each 64 kbps-equivalent has been counted as one line.
- UNE loops connected to that wire center, including UNE loops provisioned in combination with other unbundled elements (*e.g.*, EELs and business UNE-P lines). Each 64 kbps-equivalent has been counted as one line. Thus, for example, each DS1 loop has been counted as 24 business lines. Qwest does not track UNE-P separately by residential and business. Qwest derived an estimate of business UNE-P lines in each wire center based on the percentage of white page listings for that wire center that are business, rather than residential. All of these data are current as of December 2003.

Fiber-Based Collocators. Qwest also verified the number of collocation arrangements that satisfy the *Order's* definition of "fiber-based collocator," for each wire center that would qualify for unbundling relief for high capacity loops or transport, based on the nonimpairment standards adopted in the *Order*. Qwest used its most current billing data, as of February 2005, and physical inspections to identify collocation arrangements that satisfy the definition in the *Order*. To the best of its knowledge, Qwest has counted each collocator and any of its affiliates as only one collocator for purposes of this analysis.

To the extent this submission, or similar submissions by other incumbents, raise any questions or disputes, those issues should be addressed by the Commission, rather than state commissions. The Commission clearly is in the best position to address these issues in an expeditious manner. Over the past several years, the Commission has dealt with very similar issues in evaluating numerous petitions for pricing flexibility filed by price cap LECs. In that context, the petitioning price cap LEC must provide individual notification to each CLEC upon which the price cap LEC's petition relies. The notification identifies the information that the price cap LEC has included in its petition, such as the wire centers in which the CLEC has fiber-based collocation. The CLECs then have 15 days to file comments or objections to the petition.³ The Commission's experience in the pricing flexibility context demonstrates that it is well equipped to resolve any disputes that may arise regarding the accuracy of the ILEC's fiber-based collocation and other data. Adoption of a similar procedure here would ensure that these factual disputes are resolved quickly and efficiently.

The Commission is also best suited to address any questions of interpretation of the *Order* that may arise in determining which wire centers and routes are affected by the *Order*. In the pricing flexibility context, a number of similar questions arose when the first several pricing

³ See 47 C.F.R. § 1.774(c), (e).

Mr. Jeffrey J. Carlisle

flexibility petitions were filed. To the extent such issues arise here, the Commission should resolve those questions to ensure a consistent application of the *Order*.

Please let us know if you have further questions about this matter.

/s/ Gary R. Lytle
